

3D Model & Side Elevation Specification

Project: Modern Luxury Villa Design 3.0 (3D SketchUp / Elevation Asset)

3D File Name	morya_design_3d_sideview_v2.skp	Software Format	SketchUp 2024 / OBJ / FBX
Project ID	MTG-4V68H-000	View Angle	Side Elevation & Poolside Perspective
Rendering Engine	V-Ray / Lumion Ready	Status	Approved 3D Asset

1. 3D Model Structure & Scene Breakdown

The **morya_design_3d_sideview_v2.skp** 3D model file has been successfully prepared and linked to the admin console [cite: 3]. It encompasses fully modeled volumetric massing, exterior cladding, side facade fenestration, and surrounding landscape elements.

Component Group	Material / Finish ID	Modeling & Texture Details
Side Facade Walls	STUCC-WHT-01	Smooth exterior plaster with clean reveals and shadow lines
Vertical Louvers	WD-TEAK-04	Individual 3D modeled teak wood battens for side sun screening
Side Windows & Glazing	GLZ-BRZ-02	Double-glazed tinted glass with bronze aluminum mullion frames
Cantilever Roof Slabs	RCC-OFFW-03	Exposed concrete edge profiles with drip grooves
Landscape & Hardscape	GRN-TRP-05	Perimeter tropical planting beds and stone pathway pavers

2. Side Elevation Perspective Guidelines

- **Camera Angle:** Orthographic parallel projection or 35mm perspective focused on the western side facade and boundary interface.
- **Lighting Setup:** Late afternoon sun angle (Azimuth 210°, Altitude 35°) to highlight the depth of the vertical louvers and balcony overhangs.
- **Shadow Caching:** High-resolution ambient occlusion enabled to emphasize architectural recesses and slab joints.

3. Integration & Rendering Workflow

The model geometry is optimized with clean component tagging, ensuring seamless export into V-Ray or Lumion for photorealistic client presentations and marketing collateral.
